

USZ Hospital Ward Renovation

In the context of a general renewal of the Universitätsspital Zürich, the NORD2 ward on floors E and F was renovated. The inpatient ward, originally built in 1992, no longer met current standards.

On an area of approx. 5000m², four wards with 140 beds as well as treatment rooms were built. The renovation was carried out in phases during ongoing operation. The last stage was completed in spring 2021.
