

ANNAplus, Hirslanden Klinik St. Anna

With the ANNAplus project, Hirslanden's Klinik St. Anna is setting a milestone for its long-term development. The project includes the extension wing G, the replacement wing A+ as well as temporary buildings to maintain operations throughout the construction.

Wing G connects to the existing hospital and is the new address for the Institute of Radiology and Nuclear Medicine, the cardiac catheter laboratory and angiography department. During the construction of the replacement wing A+, wing G will also serve as a temporary base for the intensive and intermediate care units. In wing A+, space will be created for the emergency department, new operating theatres, the intensive and intermediate care units, hospital wards and further functions. The construction will run parallel to ongoing hospital operations.

Client

Hirslanden Klinik St. Anna, Lucerne
