

Roche B629 Hochbergerstrasse Workshops, Basel

Due to the age of various buildings in the main F. Hoffmann-La Roche AG campus, a large number of renovation measures are necessary. The BSN Programme (offices and service buildings north) includes part of the implementation of these measures. The BSN Programme covers several demolition, renovation and new building projects, such as the temporary relocation of the Roche workshops from the main campus to the provisional external site B629.
